

BIO STRAINER

Organic waste strainer for kitchen sinks
Collect organic food waste directly in the Bio Strainer
Made from antibacterial, food-safe polypropylene

This is how it looks in the cupboard under my kitchen sink.

The plastic bag on the door is for residual waste. The bin on the left is for food waste and the bin on the right is for metal, plastic & drink cartons.

Inconvenient.

This design-protected BIO STRAINER makes it easier to sort waste, and it will be easy to empty into the right sorting container, wherever it lives.
